---

SIMIAN (Simulation innovation) develops the methodology and the applicability of simulation in the social sciences. All social science theories try to understand relationships between individuals and larger social patterns. Simulation is a novel technique combining the advantages of statistics (testing models against real data) and qualitative research (recognising the importance of individual interaction for social regularity).

This forum facilitates all users to know more about social simulation and research methods used in SIMIAN. To make the most of the forum, write your queries/comments in the relevant thread.

Start by registering at the forum. Don't forget to tell us about yourself and your interests on the "Welcome Mat".

Welcome to the SIMIAN Forum.
